

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A backprinting recording medium, comprising a transparent substrate, an ink-absorbing layer formed on the transparent substrate and a porous ink-permeable layer formed on the ink-absorbing layer and produced by dispersing a filler in a ~~binding-binder~~ resin, wherein:

the binder resin includes a first polyester resin and a second polyester resin, the resins being present in a ratio of from 1:1 to 7:3 of the first polyester resin to the second polyester resin;

the first polyester resin has a glass transition temperature of from 35°C to 80°C, and a Shore D hardness at 25°C of from 60 to 80;

the second polyester resin has a glass transition temperature of less than 35°C, and a Shore D hardness at 25°C of less than 60; and

~~the binder resin constituting the ink-permeable layer has a glass transition temperature of 10°C or higher from 23.1°C to 41.2°C, and a Shore D hardness at 25°C of 40 or higher from 50 to 62, and~~

~~the binder resin constituting the ink-permeable layer is a polyester-based resin.~~

2-6. (Cancelled)

7. (Previously Presented) The backprinting recording medium as defined in claim 1, wherein the filler measures 0.5 to 30  $\mu\text{m}$ .

8. (Previously Presented) The backprinting recording medium as defined in claim 1, wherein the binder resin is present in an amount of 5 to 200 weight parts per 100 weight parts of filler.
